

Chapter 6, Exercise 4

a.

b.

From Table: $P(\text{Storm} = T) = 0.3077$

S	$P(\text{Burglar} = T S)$
T	0.25
F	0.33

S	$P(\text{Cat} = T S)$
T	0.75
F	0.222

Burglar	Cat	$P(\text{Burglar} = T S)$
T	T	1
T	F	0.667
F	T	0.25
F	F	0.2

(C.) When Burglar = true and Cat = True, the Conditional Probability table reveals that ALARM = true is the MAP Prediction.

$$(D.) \quad P\left(\frac{a}{s}\right) = \frac{P\left(\frac{a}{s}\right)}{P(s)} = \sum \frac{P(a, B, C, S)}{P(s)}$$

$$= \sum P(a, B, C, S) = \sum P(a | B, C) \cdot P\left(\frac{b}{s}\right) \cdot P(C | S) \cdot P(S)$$

$$= [(1.08)(0.25)(80)(0.75)(0.3077)]$$

$$+ [(0.667)(0.25)(0.25)(0.377)]$$

$$+ [(0.25)(0.75)(0.75)(0.3077)]$$

$$+ [(0.2)(0.75)(0.25)(0.3077)]$$

$$= 0.125324$$

$$p\left(\frac{a}{s}\right) = \frac{p\left(\frac{a}{s}\right)}{p(s)} = \frac{0.125324}{0.3077} = \boxed{0.4073}$$

$$\Rightarrow p(\text{ALARM}=\text{FALSE})=0.5927$$

So in this instance, ALARM=false is the MAP Prediction.

$$\frac{p(a, b, c, 2)}{p(2)} = \frac{p\left(\frac{a}{2}\right)}{p(2)} = p\left(\frac{a}{2}\right)$$

$$\left[(4 \cdot 10^{-10}) (2 \cdot 10^{-10}) (0.8) (2 \cdot 10^{-10}) (0.1) \right] =$$

$$\left[(1.28 \cdot 10^{-20}) (2 \cdot 10^{-10}) (2 \cdot 10^{-10}) (4 \cdot 10^{-10}) \right] +$$

$$\left[(1.28 \cdot 10^{-20}) (2 \cdot 10^{-10}) (2 \cdot 10^{-10}) (4 \cdot 10^{-10}) \right] +$$
